

mSigSDK performs mutational-signature analysis in the browser

Public spectra, catalogs, identifiers, and runtime assets can be fetched; complete user spectra and MAF rows are not uploaded.

Optional public fetches

Complete user spectra and MAF rows are not uploaded

strictLocal disables public-ID and coordinate fetches.

Local browser / device boundary

Mutational-signature computation runs locally in the browser.

Complete user spectra, MAF rows, exposures, QC, plots, and reports remain local unless exported.

mSigSDK analysis core

Native JavaScript tier

1 Validate spectra

2 Fit signatures

3 NMF extraction

4 QC evidence

Example exposure output

SBS4  82%

SBS18  6%

SBS40  5%

Package adapters

Pyodide/WebR worker tier

R / WebR

 **deconstructSigs** 1.8.0

 **sigminer** 2.3.1

Python / Pyodide

 **SigProfilerAssignment** 1.1.3

 **MuSiCal** 1.0.0
