

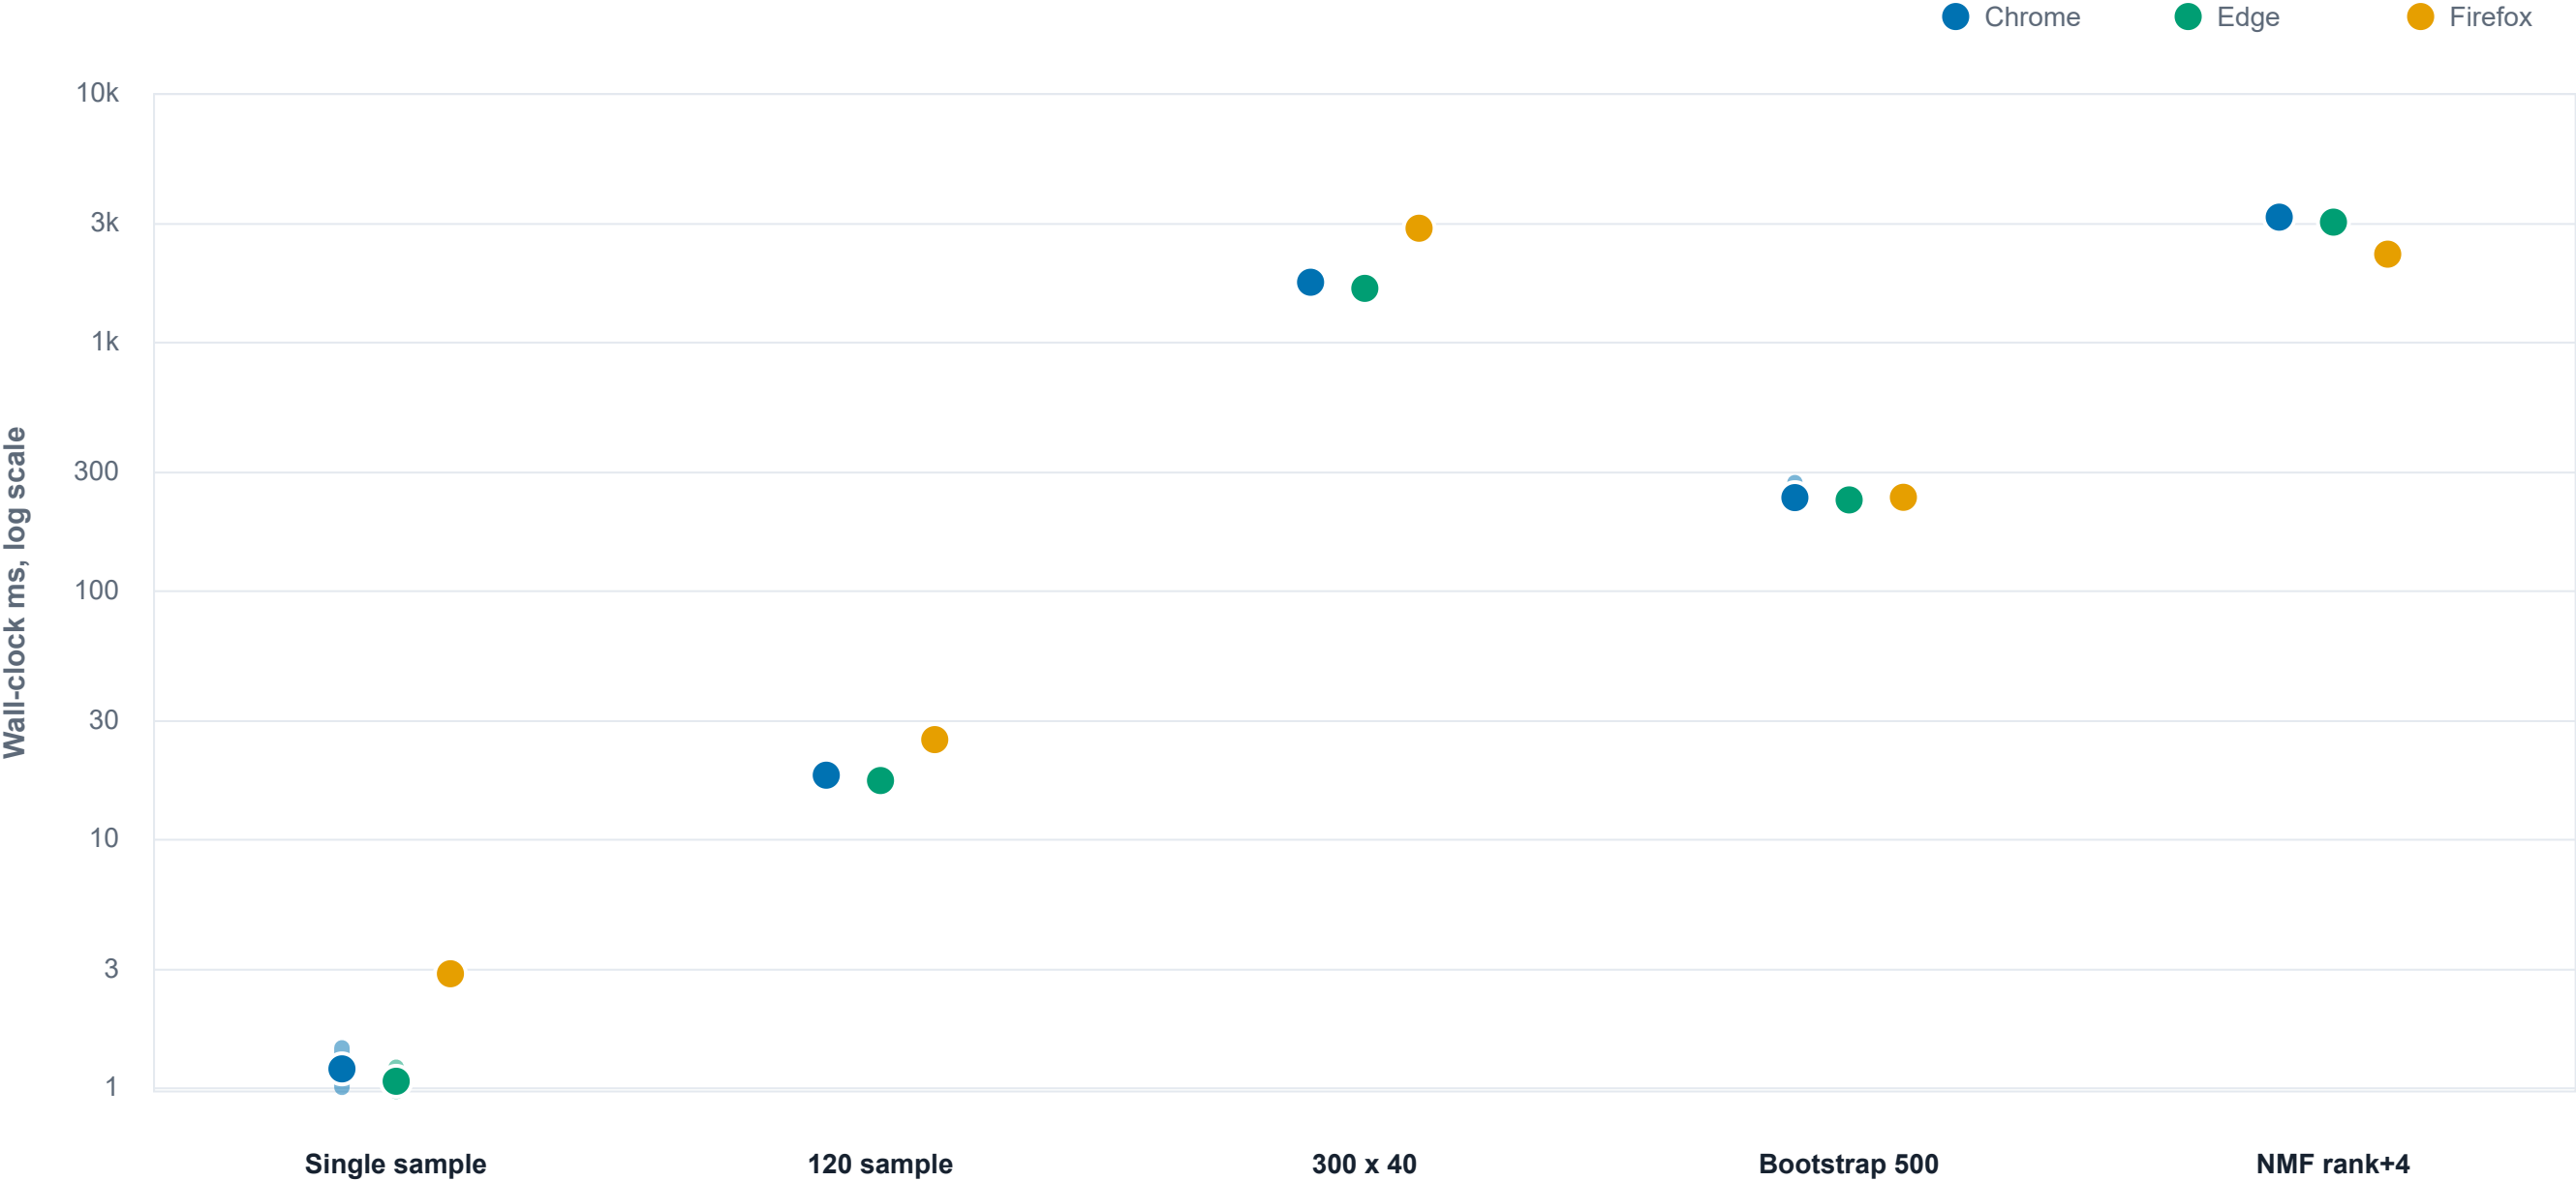

Figure 4. Exposure-solve scenarios only

Warm-start browser distributions from ≥ 20 isolated repeats per scenario; dots are medians and bars are IQR.

Raw data include cold-start and warm-start phases plus load/network/module/compute/serialization fields. Warm medians shown here range 1.07-3196.12 ms; cold medians range 1305.99-6094.38 ms.

Peak JS heap is available only where the browser exposes performance.memory; Firefox reports unavailable in the raw artifact.
